

Case Study: Global CAPA Implementation at a Major Medical Device Firm

I. Objectives

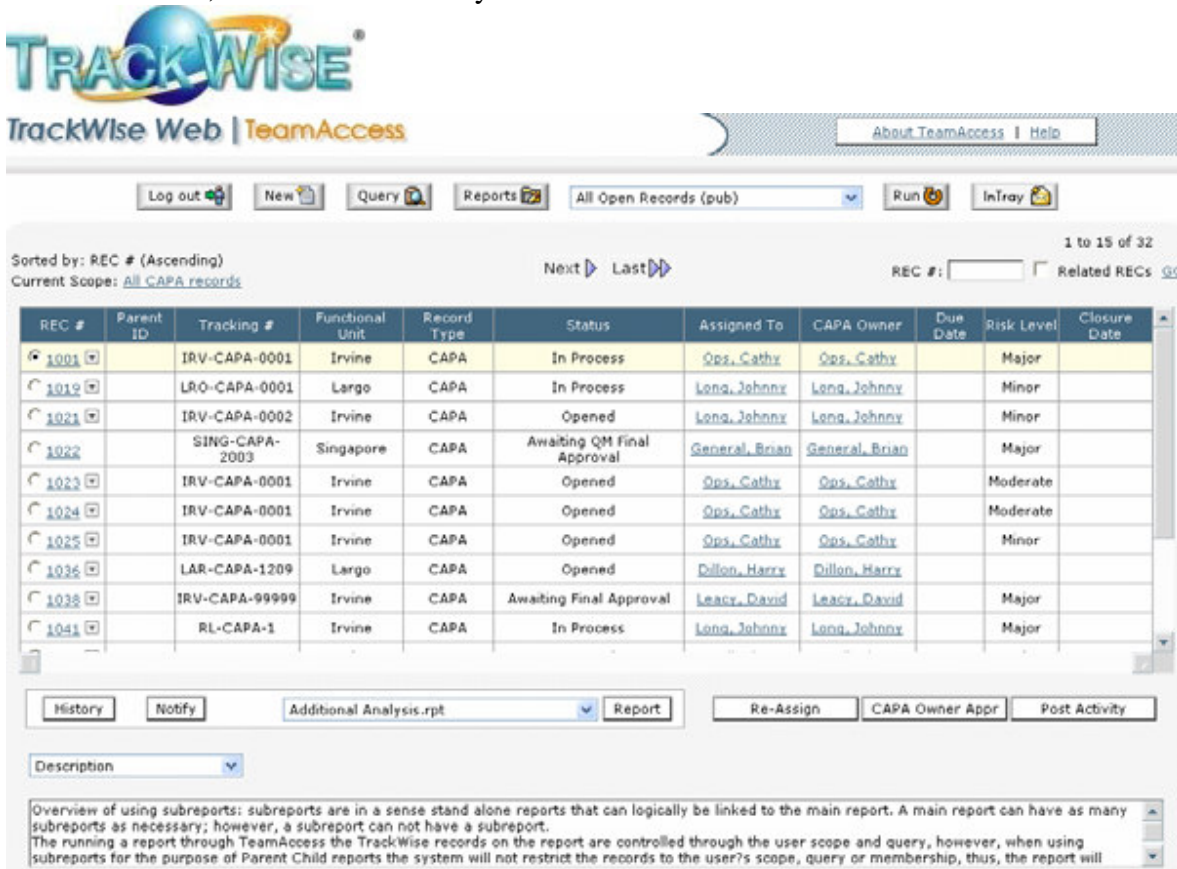

- Implementation was triggered by MD's 483 procedures.
- Implement a robust, standardized process across all functional units in all four divisions

II. Methodology

- Gap analysis & process re-engineering
- Consolidation of general office & manufacturing facility practices
- Developed & trained out an interim Access based, web CAPA system
- TrackWise implementation Project Management
- Quality sub-systems non-conformity processes evaluation
- Development of escalation processes to management review
- Overall project management for FDA commitment tracking

III. Achieved Results

- Standardization, implementation and global roll-out across 40 sites of a single instance, web-based CAPA system

Description

Overview of using subreports: subreports are in a sense stand alone reports that can logically be linked to the main report. A main report can have as many subreports as necessary; however, a subreport can not have a subreport. The running a report through TeamAccess the TrackWise records on the report are controlled through the user scope and query, however, when using subreports for the purpose of Parent Child reports the system will not restrict the records to the user's scope, query or membership, thus, the report will
